

[Project Page](https://github.com/cvg/limap) <https://github.com/cvg/limap> - LIMAP: A toolbox for mapping and localization with line features

A handful of 3D line segments suffice to describe the geometry!!  
 -----> Lines are complementary to feature points : )

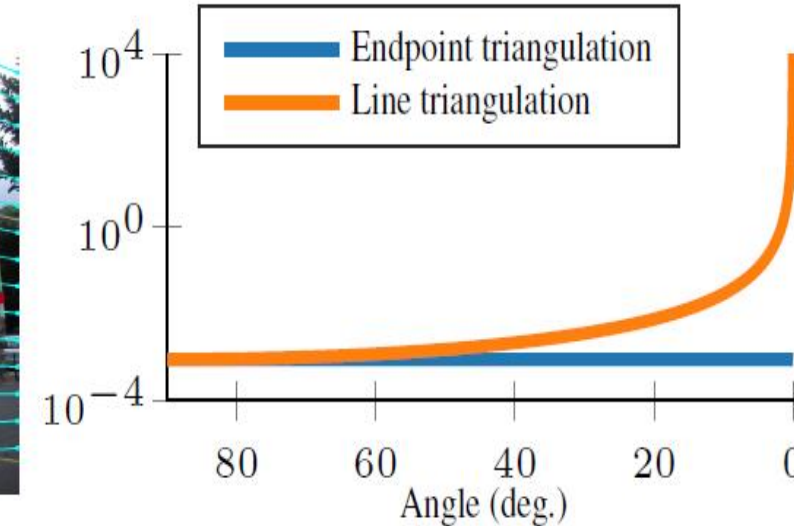

- Inconsistent endpoints
- Line Fragmentation
- No Two-view Geometric Verification
- Weak matchers
- Degenerate Configurations
- .....

Lines parallel with epipolar lines lead to degenerate configurations!

### Solutions

- Point/VP-assisted proposal triangulation  
 Either an associated point or VP provides 2DoF
- Cross-view verification on both 2D and 3D  
 Robust scale-invariant metrics between line segments
- Joint refinement with associations  
 Potentially extended to camera poses as full BA
